

ABSTRACT OF THE DISCLOSURE

A display unit having a communication control circuit for communicating with an externally connected computer, wherein the communication control circuit includes a comparator for comparing first identification information which is previously stored in said display unit and second identification information which is previously stored in the computer and is sent from the computer. The communication control circuit further includes a communication prohibitor for prohibiting communication between the computer with respect to display control of the display unit, when the first and second identification information do not match as a result of the comparison by the comparator.
